

Initial Testing Guide

STRH HRIS User Manual

A practical guide for HR personnel testing the Human Resource Information System

Field	Details
Audience	STRH HR testers, HR supervisors, and system coordinators
Testing Stage	Initial user testing / UAT familiarization
System URL	To be provided after port forwarding or local network deployment
Recommended Browser	Current Google Chrome or Microsoft Edge

Purpose: This manual helps HR test the current system behavior and record issues clearly. It is not yet the final production operations manual.

Contents

- 1. Testing Preparation
- 2. Sign In and Navigation
- 3. User Roles
- 4. Module Quick Reference
- 5. HR Testing Scripts
- 6. Known Initial Testing Notes
- 7. Issue Reporting Template

1. Testing Preparation

Before testing, confirm that the system is running and that HR has been given test accounts. For local development, the project launcher starts the application at <http://localhost:47100>. For STRH testing through port forwarding, use the forwarded URL provided by the system administrator.

Done	Test Activity	Expected Result / What To Record
[]	Confirm the test URL opens.	Login page appears with STRH/agency branding.
[]	Confirm HR test account credentials.	Tester can sign in and see HR modules.
[]	Prepare sample employee records.	Use real-like but approved test data only.
[]	Prepare feedback notes.	Record exact module, action, expected result, actual result, and screenshot if possible.

Data Privacy: Use only authorized test data. Do not upload confidential records unless STRH has approved the testing environment for that data.

2. Sign In and Navigation

1. Open the system URL in a supported browser.
2. Enter the assigned username and password.
3. Click Sign In.
4. If the account is using a temporary password, change the password when prompted.
5. Use the left sidebar on desktop or bottom navigation on mobile to move between modules.

The dashboard shows workforce totals, employment type mix, age profile, gender distribution, employees by division, and quick links for common HR actions.

3. User Roles

Role	Typical Access During Testing
Admin	System administration, users, backups, audit/error logs, plus HR modules.
HR	Dashboard, employee records, attendance, plantilla, movements, service records, leave, reports, and settings.
Viewer	Read-oriented access to dashboard, employees, plantilla, movements, service records, and reports.
Employee	Self-service dashboard, profile, attendance, leave filing, requests, and PDS generation.

Account Locking: Three failed login attempts lock the account. An Admin can unlock the account or reset the password.

4. Module Quick Reference

Module	Use It To Test
Dashboard	Verify summary counts, charts, and quick links.
Employee Management	Search, filter, add employee, open 201 file, and remove a record from the active list.
201 File	Update personal/employment details and maintain family, education, eligibility, work, training, service, and IPCR records.
Attendance DTR	Import biometric/file punches, refresh DTR, add/edit/delete DTR rows, handle correction requests, and generate DTR Excel/PDF.
Plantilla & PSIPOP	Create plantilla items, assign/vacate employees, view occupancy, vacancy,

	and movement history.
Employee Movements	Prepare, submit, review, approve, post, reverse, and inspect action history for personnel movements.
Service Records	Review movement-derived service history, add legacy periods, and export generic Excel/PDF service records.
Leave Management	File leave, approve/disapprove/cancel, generate CS Form No. 6 Excel/PDF, and manage leave types.
Self-Service / My Requests	Validate employee-side leave filing, DTR correction requests, request history, and PDS generation.
Reports & Analytics	Currently a report catalog; broad report generation is still pending.
System Administration	Manage users, reset passwords, unlock accounts, create backups, and review audit/error logs.
Settings / References	Update agency branding and maintain reference libraries such as departments, positions, salary grades, and HR coded values.

5. HR Testing Scripts

Employee Management and 201 File

Done	Test Activity	Expected Result / What To Record
[]	Search by name, ID, or email.	Correct employees appear; no unrelated record dominates the result.
[]	Filter by department, employment type, status, and gender.	Counts and list update correctly.
[]	Add a test employee.	New employee appears in the list and can be opened.
[]	Open the 201 File.	Personal, employment, contact, ID, and record tabs

		load.
[]	Add one row in education/training/work/IPCR.	Row saves, appears in the table, and can be edited/deleted.
[]	Generate or preview PDS where available.	File downloads or preview opens without layout error.

Attendance and DTR

Done	Test Activity	Expected Result / What To Record
[]	Filter by employee and date range.	DTR rows match selected employee and period.
[]	Import DTR from biometric device or uploaded file.	Punches import and DTR rows refresh.
[]	Add or edit a manual DTR row.	Manual row saves and audit/correction behavior is preserved.
[]	Submit a DTR correction request.	Request appears as Pending with original and requested values.
[]	Approve and apply correction.	Requested values are applied; audit shows reviewer and remarks.
[]	Generate DTR Excel/PDF.	Export contains the selected employee, period, noter, and rows.

Leave Management

Done	Test Activity	Expected Result / What To Record
[]	File leave for an employee.	Application is recorded with dates, days, type, reason, and Form 6 details.
[]	Approve leave.	Status changes to Approved and applicable leave

		credits are deducted.
[]	Disapprove or cancel leave.	Decision remarks are stored and status changes correctly.
[]	Generate CS Form No. 6 Excel.	Official workbook-based export downloads.
[]	Generate CS Form No. 6 PDF preview.	PDF opens or downloads; print layout should be reviewed by HR.
[]	Review leave credit ledger.	Manual adjustments, approvals, and reversals are traceable.

Plantilla, Movements, and Service Records

Done	Test Activity	Expected Result / What To Record
[]	Create or edit a plantilla item.	Item number, position, salary/funding, and status save correctly.
[]	Assign and vacate an item.	Occupancy and vacancy status update without duplicate active occupancy.
[]	Prepare a personnel movement.	Draft is created with employee, action type, effective date, authority, and target details.
[]	Submit, review, approve, and post a movement.	Posting updates employee profile and plantilla occupancy.
[]	Reverse a posted movement with reason.	Prior employee/plantilla state is restored when allowed.
[]	Open Service Records for the employee.	Posted movement periods appear; legacy period can be added if needed.
[]	Export service record Excel/PDF.	Generic export is readable and includes the non-official-template notice.

Administration, Settings, and References

Done	Test Activity	Expected Result / What To Record
[]	Create a user and link to employee when needed.	Temporary password is shown; account can log in.
[]	Reset password and unlock user.	Temporary password works and failed-login counter resets.
[]	Create a manual backup.	Backup file appears and can be downloaded by Admin.
[]	Update agency profile, logo, icon, or cover photo.	Login and app branding reflect saved settings.
[]	Add/update/deactivate a reference value.	Validation prevents invalid hierarchy, duplicate, or inactive-parent choices.

Employee Self-Service Checks

Done	Test Activity	Expected Result / What To Record
[]	Log in as an Employee account.	Employee sees My Dashboard, My Profile, Attendance, Requests, and Self-Service.
[]	Apply for leave.	Request appears in HR Leave Management and My Requests.
[]	Request DTR correction.	HR can review the request from Attendance.
[]	Generate PDS.	PDS file is generated for the linked employee.
[]	Try unrelated employee access.	Employee must not access another employee's confidential record.

6. Known Initial Testing Notes

- Reports & Analytics is currently a catalog; broad report generation/export is still pending.
- Service Record exports are generic and marked non-official until STRH provides the approved editable template and signatory rules.
- Some self-service actions such as certificate request, overtime, schedule change, and similar HR requests are placeholders or future workflow items.
- Leave accrual automation, low-balance warnings, configurable multi-level approvals, automated backups, restore workflow, and archival/retention tools require later validation or implementation.
- Biometric testing must be done with the actual STRH devices, network, time settings, and employee device IDs.
- Port forwarding and production URL setup will be handled later; this manual only prepares HR for application testing.

7. Issue Reporting Template

Field	What HR Should Write
Tester	Name of person testing.
Date / Time	When the issue happened.
Module	Example: Leave Management, Attendance DTR, Employee 201 File.
Test Account / Role	Example: HR, Admin, Employee.
Steps Taken	Numbered actions performed before the issue occurred.
Expected Result	What HR expected the system to do.
Actual Result	What the system did instead.
Screenshot / File	Attach screenshot or generated export when useful.
Severity	Low, Medium, High, or Blocking.

Suggested Testing Sign-Off

Review Area	Reviewer	Decision / Comments	Date
Employee Records / 201 File			
Attendance and DTR			
Leave and Form 6			
Plantilla / Movements / Service Records			
Self-Service			
Administration / Security / Backup
